

FAVORABLE WITH AMENDMENTS
House Bill 1057
Education - Artificial Intelligence - Guidelines, Professional Development, and Collaborative (Artificial Intelligence Ready Schools Act)

House Ways & Means Committee
March 4, 2026

Lauren Lamb
Government Relations

The Maryland State Education Association supports, with amendments, House Bill 1057, which would require the State Department of Education (MSDE) to provide artificial intelligence guidance and best practices to local education agencies (LEAs), educators, parents, and students. It would also require LEAs to create policies governing the use of artificial intelligence and establish the Maryland Education Collaborative on Artificial Intelligence in K-12 Education to study, report on, and make recommendations regarding the uses of artificial intelligence in each local school system. It would require each county board to designate a coordinator for the use of artificial intelligence and create requirements for educator professional development on artificial intelligence.

MSEA represents 76,000 educators and school employees who work in Maryland's public schools, teaching and preparing our almost 900,000 students so they can pursue their dreams. MSEA also represents 44 local affiliates in every county across the state of Maryland, and our parent affiliate is the 3-million-member National Education Association (NEA).

As educators continue to grapple with the implications of a rapidly changing artificial intelligence (AI) landscape, we appreciate efforts to ensure that any uses of AI in public schools are equitable, research-based, and developed with educator voices at the table. Underscoring the timeliness of this issue are the five principles for the use of AI in education adopted by the National Education Association in 2025:

- 1. Students and educators must remain at the center of education**
- 2. Evidence-based AI technology must enhance the educational experience**

- 3. Ethical development and use of AI technology and strong data protection practices**
- 4. Equitable access to and use of AI tools is ensured**
- 5. Ongoing education with and about AI: AI literacy and agency¹**

This legislation aims to ensure that LEAs, educators, students, and families receive clear guidance on AI, that LEAs create policies governing the use of AI, that educators are trained and aware of the risks and opportunities associated with AI, and that stakeholders can provide insight, research, and recommendations regarding AI in schools.

We appreciate the sponsor's willingness to collaborate on amendments that clarify several features of this bill and protect against unintended consequences for privacy, equity, and educator workload. We have worked together to update the following portions of the bill:

1. Guidance from MSDE

The requirements for AI guidance provided by MSDE have been amended to place greater emphasis on compliance with privacy and accessibility laws.

This directive will help ensure equitable access and strong data protection practices by outlining for LEAs and stakeholders how the use of AI in schools is governed by federal and state laws, such as the Individuals with Disabilities Education Act (IDEA), Section 504, the Family Educational Rights and Privacy Act (FERPA), and more.

2. LEA Coordinators

We thank the sponsor for the inclusion of an amendment clarifying that the LEA coordinator is not a teacher or other school-based employee, but rather a non-instructional central office employee who specializes in the use of technology systems.

3. Professional Development

As amended, this bill would require professional development for educators that covers AI use cases and ethics, including privacy, academic integrity, and strategies for preventing overdependence.

We request one additional amendment clarifying that this training will be job-embedded, paid, or eligible for licensure renewal credit.

We also encourage MSDE to continue providing AI-related online courses that are eligible for professional development points toward teachers' licensure renewal.

4. Collaborative on Artificial Intelligence

We commend the sponsors' inclusion of educator voices on a collaborative that will make recommendations regarding the use of AI in schools. This section has been amended to condense the tasks assigned to the Collaborative; this will streamline its objectives and better align its work with the experience and expertise of its membership.

As the use of AI in schools and beyond continues to evolve, we will continue to urge alignment with the NEA principles and seek opportunities to maximize the benefits of AI for education while mitigating potential risks, harms, or overreaches. This bill represents a timely step toward those aims in our current context.

With these amendments, we urge the committee to issue a favorable report on House Bill 1057.
