### COMPOUND METER INSTALLATIONS

For those installations which have compound meters installed, the base charge shall be determined using the largest size meter or register actually installed. In cases where a customer has a domestic meter and an unmetered fire line, the base charge will be determined by treating the service line size of the largest unmetered service as the meter size.

The County purchases treated water for resale from sources other than Harford Countyowned facilities and purchases raw water from the City of Baltimore for treatment and resale (purchased water).

All customers using water from the Harford County water system, including metered water customers, wholesale water customers and governmental customers purchasing water under contract, shall pay a Purchased Water Adjustment Charge, which includes the unit cost for purchased water and the County's share of certain capital improvements to the Baltimore City water system, as delineated in paragraph 11 of the 1993 Raw Water Supply Agreement between the County and the City of Baltimore, as amended (PurchaseD Water Capital Projects), to be computed as follows:

- 1. The cost of purchased water during the period preceding the period being billed shall be divided by the total gallons consumed in that same period; and
  - The estimated debt service (based on a 20-year recovery schedule), related to capital project(s) approved by the County Council for Purchased Water Capital Projects, shall be divided by the total number of gallons consumed; and
  - 3. The Purchased Water Adjustment Charge shall equal the sum of the rates calculated in steps 1 and 2 above. The Purchased Water Adjustment Charge shall be multiplied by the total amount of water consumed by each customer in the Harford County water system; and
  - 4. The amount calculated in Step 3, above, shall be added to, and be in addition to, all other charges in the applicable water quarterly billing schedule; and
  - The Purchased Water Adjustment Charge shall be modified each billing period until the total cost of purchased water and all capital expenses, including debt service costs, for purchased water capital projects are recovered; and
  - 6. When purchased water is obtained and is consumed in a portion of the water system which is physically separated from the rest of the County central system, the calculations described in Steps 1, 2, 3, and 4 above shall be performed separately for customers of that portion of the water system.

#### WATER ASSET REINVESTMENT CHARGE

Beginning on July 1, 2017, all customers using water from the Harford County water system, including metered customers, wholesale water customers and governmental customers purchasing water under contract, shall pay a Water Asset Reinvestment Charge (WARC) for each connection based on the size of the largest water meter installed. In cases where a customer has a domestic meter and an unmetered fire line, the base charge will be determined by treating the service line size of the largest unmetered service as the meter size.

The WARC shall be used to fund reinvestment, renewal and upgrade of facilities, equipment, infrastructure and apparatuses which are part of the water utility. Funds shall support activities such as, but not limited to, the planning, design, permitting, construction, management, replacement, upgrade and/or rehabilitation of existing assets to enhance the reliability of the system or to meet regulatory requirements.
